

Product:	EASY PHOS 'Bare Metal Protection'
Product Code:	EASYPHOSCAN, EASYPHOS12CAN, EASYPHOS5L, EASYPHOS20L, EASYPHOS200L
Introduction:	<p>Oxytech's EASY PHOS is a one step phosphate, degreaser and sealer for bare metal protection. EASY PHOS is specifically formulated as a pre-paint treatment for steel, galvanised steel and aluminium and is easily applied by aerosol, spray gun or brush. EASY PHOS, when dry, protects the surface from surface rust, fingerprints, etc during temporary indoor storage (usually for 6 months or more).</p> <p>EASY PHOS performs a conversion of the metal surface by the deposition of a phosphate layer, which is then sealed with a purpose-formulated organic polyphosphate. Most powder coatings and solvent based paints used to coat steel and/or aluminium are compatible with EASY PHOS.</p>
Applications:	Automotive fabrication & restoration, pre-paint treatment, applied after media blasting or chemical stripping to stop surface rust forming.
Pack Sizes:	300g Aerosol (individual or carton of 12 cans), 5 Litre, 20 Litre & 200 Litre
Application Schedule:	<p><u>Aerosol and Spray</u> (automotive spray gun, pressurised pump spray or airless spray system)</p> <p><i>For clean or newly media blasted metals:</i> Apply a light, even coat of EASY PHOS to the desired area and allow to dry (<5 minutes).</p> <p><i>For oily or dusty surfaces:</i> Apply EASY PHOS heavily to the contaminated area such that excess solution will lift contaminants from the surface and allow to drip dry (<10 minutes).</p> <p><u>Brush</u> Brush application is best used when the degreasing qualities of EASY PHOS are needed, using the brush to help loosen grime from surface, or in more confined spaces where spraying is not suitable.</p> <p>Heavier build up of grease and oils may require a purpose degreaser to be used first.</p> <p>NOTE: Heavy application may cause a slight yellow appearance to raw metals due to the excess of the active phosphate ingredient. This will not effect the properties of EASY PHOS.</p>

Coverage: 1 Litre of EASY PHOS will treat up to 30m² of surface (pressurised, air feed spray gun). Heavier application will reduce this considerably.

Physical & Chemical Data:	Appearance -	Clear / opaque liquid (slightly yellowish)
	Odour -	Aromatic
	Specific Gravity -	0.86 ± 0.05 at 20°C
	pH -	2.0 - 4.0 approx
	Flashpoint -	>24°C

Bare Metal Protection: 6 months or more when stored indoors in a dry environment. Surfaces which are repeatedly handled or worked may require EASY PHOS to keep the metal free from rust. If surface rust has begun to develop, apply Oxytech's ANTI-OX to remove surface rust and reapply EASY PHOS to surface.

Health & Safety: Care should be taken when applying EASY PHOS. Apply in well ventilated areas ensuring not to inhale spray or vapour. Skin contact should be avoided as much as possible. Keep away from naked flames. Please read MSDS for further information.
